

# Supply Chain Analyst

32-40 hours

€ 45.000 - € 60.000

's-Hertogenbosch

## Organization

Endologix LLC is a California-based global medical device company dedicated to improving patients' lives by providing innovative therapies for the treatment of vascular disease.

Its existing products can treat a wide range of vascular diseases. Excellent clinical results are achieved through meticulous attention to product design, manufacturing, and training, backed by leading clinical evidence. Endologix's vision is to provide physicians with groundbreaking technology, the best device for each patient. When it comes to patient welfare, Endologix is never satisfied with the status quo.

Since its inception, the company's mission has been to save and improve patients' lives by providing physicians with innovative solutions. The focus is on developing breakthrough therapies. The strong product base will broaden the focus to other areas of vascular disease.

Endologix is looking for a Supply Chain Analyst based in the European office in 's-Hertogenbosch, who is willing to contribute to the success of the company. You will work with various disciplines throughout the global and European organization such as Supply Chain, Sales, Quality and Marketing & Operations.

# About Us

## Supply Chain Analyst

As a Supply Chain Analyst, you are the essential link in the internal team and the group of field colleagues at Endologix. Endologix is committed to continuous improvements and the launch of new products. High quality, financial management, and optimal service are crucial for achieving these goals and are literally a matter of life. With a budget of 15 million euros, your role is significant.

As spider in the web in this international supply chain, you manage the inventories of European locations with careful consideration and strong coordination. Warehouse processes, procurement activities, distribution channels, and collaboration with distributors—all fall within your purview. It's a fascinating challenge where your meticulous analysis of information, inventory levels, cycle counts, and goods flows forms the basis for actions, management decisions, and forecasts. This includes managing inventory at larger customers, consignment sales, trunk stock locations, and logistics service providers.

The daily demand planning and its analysis might be more complex than it initially seems. Consider the numerous product combinations, capital intensity, and shelf-life data. The value as a supply chain analyst translates into reporting on inventory, logistics, and sales metrics. Organization being the key to your success. The assessments you make lead to actions; perhaps you identify potential risks and propose low-risk solutions, which is certainly expected of you. Inventory reduction where possible, destruction where unavoidable, repairing damaged devices where it is meaningful. Or even a recall, sometimes it's inevitable. All of this forms the puzzle that reflects your meticulous approach, reliability, and indispensability. Perhaps the "blue" element in your performance?

The routine site-management reviews rely on your flowcharts, analyses, and reports as evidence of being in control. During internal and external inspections and audits, you are the expert. Also, in new projects and continuous improvement initiatives, the supply chain analyst directly contributes to Endologix's strategic goals. Isn't it a tremendous motivation that a perfectly operating supply chain can help more people with implants?

Although described above, nevertheless a point-by-point enumeration of the tasks:

- Responsible for inventory management throughout European stock locations
- Monitors and analyzes the usage and forecast inputs to provide a reasonable demand plan.
- Responsible for cycle count reconciliation activities for throughout European locations
